Boost Stack

Demo: <http://demo.yuzoolthemes.com/boost/>

Overall

Boost Stack Setup

Create badass, fluid and smooth transition between your website's pages. Super fast cache that pre-loads content and makes RapidWeaver sites much faster.

It helps reducing the delay between your pages, minimizing browser HTTP requests and enhancing your user's web experience.

Works with Foundation, Foundry, UKit, Blueball Freestyle Theme, Navigation Stack, Blank Theme, JW Blank and any Navigation theme or RapidWeaver framework that places the Navigation inside the Body Stacks content. This means it is compatible and speeds up all Stacks also.

To use it add a Boost Stack to your page. And place all your site's content (including Navigation) into the Boost Stack. Add this to each and every page. Republish your site. And you will see a faster site.

Since there is a 100-300ms delay during the user hover and the click, we can use this time to start prefetching the page. Most of the time this dead time is enough to get the next page ready!

No amends needed to your server and this Stack works best if any optimisation on your server doesn't exist or is switched off.

Notes on Browser Compatibility:
<https://caniuse.com/#search=pushstate>

That's all folks!

Hope you like it and happy weaving!
